LEARNING REPORT

On Scrum Master Training and AI in Agile Practice

Submitted By

Name: Gyan Prakash Tiwari

Course/Program: B-Tech

Roll Number: 202401100200146

Semester: V

Subject: Software Engineering

Date of Submission: 14/09/2026

1. Introduction

As part of my learning and professional development, I completed two courses related to Scrum, Agile methodology, and the use of Artificial Intelligence in Agile practices.

The two courses completed were:

- Scrum Master Training Program – Infosys Springboard
- ChatGPT for Scrum Masters: AI in Agile Practice – Omni Academy

The Scrum Master Training Program helped me understand the fundamentals and responsibilities associated with the Scrum Master role, while the ChatGPT-focused course introduced the application of Artificial Intelligence as a supporting tool in Agile practices.

The combination of these two courses provided me with an understanding of both Agile project management practices and modern AI-assisted approaches that can be applied in collaborative and software-development environments.

2. Objectives of the Learning

The main objectives of completing these courses were:

- To understand the role and responsibilities of a Scrum Master.
- To develop an understanding of Agile ways of working.
- To learn the importance of teamwork and collaboration in Agile projects.
- To understand how Scrum can support effective project development.
- To explore the use of ChatGPT and Artificial Intelligence in Agile practices.
- To understand how AI can assist with productivity and project-related activities.
- To develop better communication and problem-solving skills.
- To understand how traditional Agile practices can be combined with modern technologies.

3. Course 1 – Scrum Master Training Program

Course Name: Scrum Master Training Program

Learning Platform: Infosys Springboard

Completion Date: 16 August 2026

The certificate provided for the course confirms that I successfully completed the Scrum Master Training Program on 16 August 2026.

3.1 Overview

The Scrum Master Training Program introduced me to the role of a Scrum Master and the importance of Agile approaches in project development.

A Scrum Master plays an important role in supporting a Scrum team, facilitating collaboration, encouraging effective communication, and helping the team work toward continuous improvement.

The course helped me understand that Agile development is not only about completing tasks but also about creating an environment where team members can communicate effectively, adapt to changes, and continuously improve their way of working.

3.2 Major Learning Areas

Through this learning experience, I developed an understanding of:

- The role of a Scrum Master.
- Agile-oriented project development.
- Team collaboration and communication.
- Facilitation within a team.
- Continuous improvement.
- Transparency and effective information sharing.
- Supporting teams in solving project-related challenges.
- The importance of adaptability in project development.

3.3 Skills Developed

The course contributed to the development of the following skills:

- Team coordination
- Communication
- Leadership
- Facilitation
- Problem-solving
- Collaboration
- Project organization
- Agile mindset
- Continuous improvement

3.4 Personal Learning

One of my key learnings from this course was that a Scrum Master is not simply a person who assigns or monitors tasks. The role involves supporting the team, facilitating collaboration, identifying challenges, and helping the team continuously improve.

This understanding can be useful when working on college projects because successful projects require effective communication, proper coordination, division of responsibilities, and regular evaluation of progress.

4. Course 2 – ChatGPT for Scrum Masters: AI in Agile Practice

Course Name: ChatGPT for Scrum Masters: AI in Agile Practice

Learning Platform: Omni Academy

Duration: 4.5 Hours

Completion Date: 16 August 2026

The certificate identifies the course as “ChatGPT for Scrum Masters: AI in Agile Practice” and records a total duration of 4.5 hours.

4.1 Overview

The second course focused on the relationship between Artificial Intelligence, ChatGPT, and Agile practices.

Artificial Intelligence is becoming increasingly useful for knowledge-based activities. For a Scrum Master, AI tools can act as supporting tools for activities such as preparing information, generating ideas, improving communication, and assisting with documentation.

The course helped me understand that AI can increase productivity when it is used appropriately while human judgment and decision-making remain important.

4.2 Major Learning Areas

The course helped me develop an understanding of:

- The application of ChatGPT in Agile environments.
- AI-assisted productivity.
- Using ChatGPT for work-related activities.
- AI-supported communication.
- AI-assisted brainstorming.
- Using AI to support documentation.
- Combining AI tools with Agile practices.
- The importance of responsible AI usage.

4.3 Skills Developed

The important skills developed through this course include:

- AI-assisted problem-solving
- Prompt-based interaction with ChatGPT
- AI-assisted brainstorming
- Communication support
- Documentation support
- Productivity improvement
- Technology-based problem-solving
- Responsible use of Artificial Intelligence

4.4 Personal Learning

My major learning from this course was understanding that AI can act as an assistant rather than a replacement for people.

For example, ChatGPT can help generate ideas, prepare drafts, organize information, and support communication. However, the final decision should be evaluated by the user based on the actual project requirements and context.

This is particularly useful for students because AI tools can support project planning, documentation, brainstorming, and learning when they are used responsibly.

5. Comparison of the Two Courses

The two courses provided complementary learning experiences.

Aspect	Scrum Master Training Program	ChatGPT for Scrum Masters
Main Focus	Scrum and Agile practices	AI application in Agile
Main Skill	Scrum Master practices	AI-assisted productivity
Teamwork	Collaboration and coordination	AI-supported collaboration
Problem Solving	Agile problem-solving	AI-assisted brainstorming
Communication	Team communication	AI-assisted communication
Technology	Agile project practices	ChatGPT and AI
Overall Learning	Understanding Scrum	Combining Scrum with AI

The first course provided the foundation of Scrum and Agile practices, while the second course added the perspective of Artificial Intelligence and ChatGPT.

6. Combined Learning from Both Courses

The most valuable aspect of completing both courses was the ability to connect Agile methodology with Artificial Intelligence.

Scrum provides a structured approach to teamwork and project development, while AI tools can potentially make certain knowledge-based activities faster and more efficient.

For example:

Scrum/Agile → Plan → Collaborate → Develop → Review → Improve

AI can support several activities within this process by helping with:

- Idea generation
- Documentation
- Communication drafts
- Information organization
- Brainstorming
- Problem analysis

However, AI should support the Agile team rather than replace the team's responsibility for decisions.

7. Application of Learning in College Projects

The knowledge gained from these courses can be applied to academic projects and group assignments.

7.1 Project Planning

Scrum concepts can be used to divide a project into smaller tasks and organize the work of team members.

7.2 Team Coordination

The principles of collaboration and communication can help team members coordinate their responsibilities more effectively.

7.3 Problem Solving

ChatGPT can be used as a brainstorming assistant to explore different approaches to a technical or project-related problem.

7.4 Documentation

AI tools can help create initial drafts of project documentation, meeting summaries, checklists, and other written material.

7.5 Continuous Improvement

After completing different stages of a project, the team can review what worked well, identify problems, and make improvements for the next stage.

7.6 Responsible AI Usage

AI-generated content should always be reviewed, verified, and adapted according to the actual requirements of the project.

8. Key Learning Outcomes

After completing both courses, I gained the following learning outcomes:

- Developed a basic understanding of Scrum Master responsibilities.
- Improved my understanding of Agile teamwork and collaboration.
- Learned the importance of communication in project development.
- Developed awareness of continuous improvement in Agile projects.
- Understood how ChatGPT can support Agile-related activities.
- Learned about AI-assisted productivity and brainstorming.
- Developed awareness of responsible AI usage.
- Understood how Agile methodologies and modern AI tools can complement each other.
- Improved my ability to think about project management from both a process and technology perspective.
- Gained knowledge that can be applied to future academic and software-development projects.

9. Personal Reflection

Completing these courses was a valuable learning experience because they introduced me to two important areas of modern project development: Agile methodology and Artificial Intelligence.

The Scrum Master course helped me understand the importance of teamwork, communication, coordination, and continuous improvement. It also changed my understanding of leadership by showing that effective team leadership is not only about giving instructions but also about facilitating and supporting team members.

The ChatGPT course helped me understand how Artificial Intelligence can be incorporated into Agile practices. I learned that AI can be useful for generating ideas, organizing information, supporting documentation, and improving productivity.

The combination of both courses has encouraged me to explore how modern AI tools can be used responsibly to improve project development while maintaining human involvement and decision-making.

10. Future Application

I plan to apply the knowledge gained from these courses in my future academic and professional activities.

In future group projects, I can use Scrum principles to improve task organization, communication, and collaboration among team members.

I also plan to use AI tools responsibly for activities such as:

- Brainstorming project ideas
- Preparing project documentation
- Organizing information
- Improving written communication
- Exploring possible solutions
- Supporting project planning

At the same time, I will ensure that AI-generated information is reviewed and validated before being used.

11. Conclusion

The completion of the Scrum Master Training Program and ChatGPT for Scrum Masters: AI in Agile Practice courses has enhanced my understanding of Agile methodologies and modern AI-assisted practices.

The Scrum Master Training Program provided a foundation for understanding Scrum, teamwork, communication, facilitation, and continuous improvement. The ChatGPT course complemented this knowledge by introducing the use of Artificial Intelligence in Agile environments.

Overall, these courses helped me understand that effective project development requires both strong human collaboration and appropriate use of technology. Scrum provides a framework for organizing and improving teamwork, while AI can serve as a useful supporting tool for productivity and problem-solving.

This learning will be valuable for my future academic projects, software-development activities, and professional career.

12. Certification Details

Certificate 1

Course	ChatGPT for Scrum Masters: AI in Agile Practice

Provider	Omni Academy
Duration	4.5 Hours
Completion Date	16 August 2026
Learner	Gyan Prakash Tiwari

Certificate 2

Course	Scrum Master Training Program
Provider	Infosys Springboard
Completion Date	16 August 2026
Learner	Gyan Prakash Tiwari
Certificate Issued	18 August 2026
